Mipa 1K-Plastic-Grundierfiller-Spray

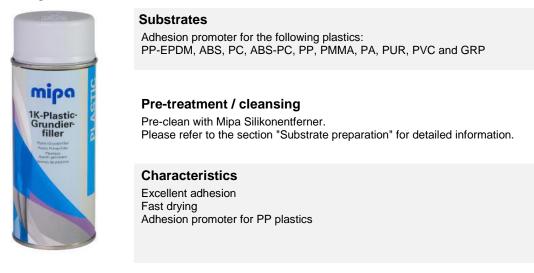

Item no. 213390000 Technical data sheet

page 1/2 Profess

Intended use

Mipa 1K-Plastic-Grundierfiller-Spray is a fast drying plastic primer with good filling properties for use on plastics commonly used in the automotive sector. Due to its special formulation, Mipa 1K-Plastic-Grundierfiller-Spray can also be used on very difficult plastics such as PP without additional pre-treatment. Complex processes such as flame treatment or plasma processing become unnecessary in many cases. Overcoatable with Mipa 1K and 2K topcoats.

Processing instructions

Colour / gloss level

Light grey / matt

Preparation

Before use, shake can vigorously for 1 - 2 min!

Application

Spray to test - spray distance approx. 20 - 30 cm 2 - 3 thin coats, dry film thickness: 15 - 40 µm

Flash-off

2 - 3 min between coats

After use

After use, turn can upside down and spray until the valve is clean, this prevents the valve from clogging up.

Version: en 0322

Mipa 1K-Plastic-Grundierfiller-Spray

page 2/2

	Drying time at 20 °C	
	Dust dry after approx.	5 - 10 min
	Overcoatable after approx.	15 - 20 min
Processing conditions	From +10 °C and up to 80 % relative air humidity. Ensure adequate air ventilation.	
Storage	Can be stored for 2 years in cool and dry places.	
VOC-regulation	EU limit value for this product (cat. B/e): 840 g/l This product contains max. 750 g/l of VOC.	
Safety information	See safety data sheet	

Processing instruction

Do not overcoat with polyester-based materials.

Substrate preparation:

- 1. Before painting, reheat the object to be painted for 60 minutes at 60°C.
- 2. Degrease with Mipa Kunststoffreiniger antistatisch or Mipa Silikonentferner.
- 3. Sand thoroughly with MP Softpad Superfine using Mipa Kunststoffreiniger antistatisch or Mipa Silikonentferner .
- 4. Clean again with Mipa Kunststoffreiniger antistatisch or Mipa Silikonentferner.
- 5. Allow parts to dry completely.
- 6. Recommended for neutralising electrostatic charges:

Blow off the surfaces by means of MP lonisierungspistole X-ION that cleans and neutralises in one operation, which reduces dust inclusions when coating. In addition, this avoids differences in pigment orientation when overcoating with metallic/ effect basecoats.

ATTENTION: Releasing agents must be removed completely!

After the previously mentioned preparation, we recommend doing a wetting test with water. If the water drops roll off quickly, repeat the pre-treatment.

Due to the wide range of plastic types and compounds available on the market, preliminary tests on original parts are indispensable.
